**DETAILS**

These historic flood records are a combination of data from remote sensing, ground surveys and staff observations provided by CCC and the Environment Agency. Validated third party data and anecdotal evidence are also included. The datasets used may have been designed to be viewed by a range of map scales, and therefore this map is not intended to be viewed at a site-specific scale. These records are the best available at the time of collation, but should not be considered comprehensive. An area without a flood outline does not necessarily imply there is no risk of flooding. Queries with regard to the recorded flood extents should be directed to the Environment Agency.
