To whom it may concern,

I would like to raise some serious concerns over this proposal.

1/. We already have a new development in Whitstable which is putting a great strain on many of our utilities - mainly water. Whitstable has a known serious issue with waste water and the supply in general for the ever growing population. The water system we currently have to not fit for purpose discharging more and more waste into the sea. Before we decide you add yet more houses to the area the water system needs to be dealt with.

You cannot approve this development without understanding the negative impact it will have on not only the people of Whitstable but also the environment due to, and including other issues I will lay out, the current water system we have.

2/. The healthcare services in this community are already at capacity, many finding it hard to get a dentist or doctor.

3/. We have bans on fresh water in the summer and have done for years - adding more houses to the recently built ones impacts this massively. We DO NOT have the infrastructure for more houses.

4/. There will also be a harmful impact on the wildlife in that area. Biodiversity and nature conservation are of upmost importance in this current climate we live in and these sacred and few spaces should be kept sacred.

5/. Traffic will be increase yet ore impacting health, wildlife, the road surfaces which are already very poor indeed.

6/. The schools we have are already over subscribed and that is before the new builds which have taken place. There are enough school places for the current population of this area. Specifically secondary schools. Given there is only one.

This town will not be able to cope with roughly 3000 more residents on top of the increase we have recently had and will continue to have as the houses are still being built in the current development.

In case there is any doubt in what I have pointed our above let it be known that I OBJECT to this proposal.

Whitstable cannot cope with more houses our infrastructure is totally insufficient already!

Regards,
Mrs Kristel Ebrill
Whitstable
