This plan to build 1,400 on the farmland is not a very good idea.

1. The road structure in this part of Whitstable is very poor. Chestfield Rd already floods at the bottom of our road, [REDACTED] We are already having great difficulty getting out and the ever faster cars nearly knock us off the road coming away from the roundabout.
2. This road has already been targeted by Southern water, they are going to send 450 house worth of sewage down our old drain. this amount of houses will inflict tonnes of the stuff where?
3. we have great difficulty getting doctors appointments and as for A&E a man recently waited 12 hours for a kidney infection to be seen, sitting on a chair in agony. My dentist is so overrun my 6 month appointment is now 8 months!
4. you are already building on green areas, the litter and junk being thrown around this area is building up. The flooding in this area is not being dealt with.
5. Where are the children going to play? the present housing you are agreeing to have such small gardens there is nowhere they can let off steam, take away the green areas and you are really looking for trouble.
6. Schools, where are the children going to go, how will they get there and can they be governed properly.

We think this project has not been thought out enough. the effect it will have on the whole area is not sustainable

Having read Jeremy Clarksons book on farming I can see why the owners want to sell, unfortunately I have seen their work and it looks as if we could lose a really good farmer.
