"I OBJECT"

Whilst the details set out in the policy all sound good, we all know that when the build goes ahead half of what is in the policy will not actually materialize.

The council/utility companies, primarily water, are unable to maintain existing infrastructure such as roads, our roads are a disgrace and the council are clearly unable to maintain them so adding more and more vehicles on our roads will compound the issue. When we have a week or 2 of dry warm weather we are asked to save water which in extreme cases leads to hosepipe bans, do you really think that they will be able to supply water to thousands of additional houses?

Having read the policy new schools are proposed but what I see no mention of a new doctor surgery, appointments at current surgeries cannot cope to provide an adequate service, will the addition of thousands more patients help the situation?
