

## I. OBJECT

24-4-24

Dear Committee

Could you tell me if anybody on this committee has what I call logic. You only have to try and pour a gallon of water into a  $\frac{1}{2}$  pint pot to see it makes a terrible mess.

That is exactly what you are doing to our sea. You will probably say it's not you, it's the water company, but you are allowing it to happen by granting so much permission for housing. How about granting permission on the grounds that the builders address the sewage problem. Everywhere I go

I see houses being built at a frightening rate. My journey through Tyler village yesterday saw many many boards saying NO to 2000 houses. Absolute building frenzy going on. To live near the coast and not be able to enjoy the sea is almost criminal, how long before we cant eat what comes out of the sea. They say hindsight is a marvellous thing, but I say use a bit of foresight and stop granting all the building permission so I am OBJECTING until the sewage problem gets a look in.
