To whom it may concern

Here are
my objections to the Local
Plan for Canterbury and the
relentless housing targets
inflicted on us by central
government

Local impact 3 main issues

Water We don't have a water
or Sewage system in place
to accommodate any more
capacity as seen with the
frequent sewage outlets to the
Sea and rivers around us
multiple times a day, Southern
Water, Ofwat or Environmental
Agency don't have a policy

in place for now or the future

Food and Farming

With a global warming crises and conflict can we afford to be relying on imports to feed an ever burgeoning population to sustain us.

Farmers should be supported and all agricultural land should be properly protected and increased to ensure food security for Britain.

The plan for walking and cycling with an emphasis on public transport as a aspiration not a long term policy.

One solution could be to get rid of the grammar school system to cut down on travel to schools of personal choice, all children

in Kent should be treated equally with fairer funding for all schools. Outdated and prioritizes the more economically affluent rather than what its original intention of giving poorer children better opportunities

There is so much wrong with the entire plan, the mass house building has not reduced housing cost but have increased instead lies, lies, lies, my kids have left Kent, all very key jobs, as they were priced out. ~~for~~
