I strongly object to numbers of housing proposed in Blean and the surrounding area.

our current infrastructure in the proposed area especially our sewage and water systems are unable to cope with the current population as it is now, so how much pressure will increased new builds populations put on our infrastructure? Without the whole system collapsing? also how will our local roads in this and surrounding area cope with the increased columns of traffics and higher pollution levels created.

Also with the proposed area for development being close to Canterbury an A & E at Kent and Canterbury needs to be re opened and the hospital extended to cater for all these additional homes.

The areas proposed to build in Blean and surroundings area Are of natural beauty and we should be maintaining our green open land space as much possible - not just to help combat global warming but for our future generations to enjoy along with the natural beauty and for fragile wildlife in the area to survive and thrive.
