I live locally on [REDACTED] and pass the Thanington Recreation ground and Neighbourhood Centre regularly.

It is obvious that these facilities are in constant use by a wide range of community members, especially young people and children.

Thanington has been officially recognised as an area lacking in green space and it would be disastrous for the current and future communities if this was lost forever.

Green space is essential for health and well being. An increase of traffic would contribute further to air pollution. Removal of trees would further impact negatively on the environment.

It has been recognised, nationally and internationally, that the Thanington Neighbourhood Resource Centre is held in high regard as an example of good practice. I understand that since its inception local crime has decreased by 50%.

This proposal would have a devastating effect on its use by the community.

The proposed plan has not considered the negative effect on the environment and the consequences of its loss to present and future generations.

This proposal is ill conceived, irresponsible and lacks any consideration for the community.

It must be stopped.

Regards,

Jill Cutting
