

For the attention of canterbury city Council.

Please find enclosed a leaflet I handed out last Saturday at a walk over land that has been offered in East Sussex to build 4,000 homes.

I ask if we did build the 1.5 million homes(not that we will as we don't even train people to do real building),But what would follow? Would we build some more ,then import people I to fill them, to keep this crazy system going.

I recall in 1960,there were 13 people working on a local farm, today, there are just 3.

All industries have reduced the need to employ so many people as we create more technology to make production easier. No political party has addressed this issues.

The enclosed is my response to the new Developments consultation, coupled with the proposal for 1,400 homes in Whitstable, Brooklands farm I believe it is.

I also enclose a paper on Solar farms, and a poem.

Please look at the websites as on the leaflet.

Copy also sent to Homes England London. E14 4PU,

I look forward to your response.

Yours

Sincerely

Laurence Keeley.

3/10/25

THE FUTURE OF FARMING (continued) - There were three people working on an 188 acre farm. Today with the minimum wage becoming £12 an hour, three people would cost £1,500 a week, that can't be done on an 188 acre farm today: something has gone wrong!

SOLAR FARMS

Solar farms:- We are seeing many solar farms being built or have permission to build.

Large areas in Lincolnshire Cambridgeshire and now 3,000 acres in East Yorkshire.

The companies are paying vast sums to the land owners, who see a capital gain, without risk, unlike farming the land.

We have a growing population, building houses everywhere, taking up good food producing land.

There are now panels one can see through if they are more expensive. One could leave some panels clear.

Build them higher, and fill in the sides to create a greenhouse, so to grow salad crops, and use the carbon capture to fill the green houses with carbon to grow the crops to feed the nation.

The following text is extremely faint and largely illegible. It appears to be organized into several columns or sections, possibly containing technical specifications, a list of items, or a detailed report. The text is too light to transcribe accurately.

A CLOSING THOUGHT

The Old Oak Tree

I am a tree, or just a bit of wood,
Here I am where I've always
stood. For three hundred years in
the corner of this field, I have
seen many a yield. Life, death and
even killed, I have seen. Hot,
cold, young grow old, where I
stand in the corner of the field.

Young men come out with a
plough and share, With scythes
they come to gather the crop,
Sometimes a little, sometimes a
lot. At lunch they sat under this
tree, talked to their horse and
peed on me. Those horses then
went off to war, Often went and
were seen no more.

Why do humans want to fight?
They kill each other day and
night. I hear the people talk of
fear, Often I would shed a tear.
The tractor came with all its
power, The field was ploughed
within the hour. Fumes come out
across the field, I'm sure it must
have damaged the yield.

Nights and days, weeds and
sprays, How I long for those old
days. I had some peace long ago,
birds flew high above, Lovers
came and made their love, in the
corner of the field. Now heavy
tractors do the work. Combines
cut the corn, big bales stay out til
dawn. It's enough to make this
old tree yawn.

This tree has seen the young
grow old, Boys were young and
then were old. Later were seen
working on the land, Now they
come to hold my hand. They
talk as if they've been here for-
ever, but I know those men are
not so clever. Now I see roofs
coming near I stand here now
with some fear.

A man came the other day, He
said that I was in the way. A
road could be coming through
this part, As a factory now he
wants to start. Those humans
seem to rush and tear, While I
have only just stood here and
stared. If only they could think
of me, As just an old oak tree.

You may say of this old tree,
You have never moved or seen
any life. But I have seen a lot of
strain and stress. As the sun
comes up in the morning And
goes down in the west, I can
remember lots of jest.

The birds sing through the day
The larks through the night.
There is sometimes sorrow As I
wait for another tomorrow.
Flowers blossom in the day,
That's only if there's been no
spray. I have seen it all from
here, where I stand. I don't
need a helping hand.

But if I really had a wish that
could come true, Do you know
what I would do? I would say to
those men and women who rush
about, Stop and think what it's all
about. They are all chasing some-
thing called money, It's very sad,
and often funny.

While I eat and drink, life comes
to me, Stop and look through the
eyes of a tree. I shall still be here
when they have gone, Providing
the planners don't have their say,
And if the new houses don't come
this way. The biggest fear I have
for myself Is the human race will
destroy itself....

Laurence Keeley

Ensuring residents can walk, wheel and cycle to schools, healthcare facilities, workplaces and transport hubs requires collaboration with local authorities, infrastructure providers and community organisations. Great place-making is holistic: it interlinks homes, amenities and mobility into a single cohesive ecosystem.

Everyday access to greenery – whether through tree-lined streets, pocket parks, private balconies, or views of rivers and canals – can deliver mental and physical health benefits. Successful schemes weave nature throughout the built environment, treating it not as an optional extra but as an essential feature of urban living.

Designing health into the public realm must remain a priority. The long-term payoffs to communities and the NHS are immense.

If green spaces feel unsafe, they will go unused, particularly by women, older adults and those with mobility challenges. Developers can address this by creating environments that feel welcoming and secure.

Build Communities, not just housing estates.

I would suggest creating Community Land Trust for all new developments.

- A trust can build homes much cheaper and offer the land owner a good deal.
- The deal could be that each home nets the land owner £5,000 per home built plus ground rent of £200 per home, per annum.
- Local Councils should be finding suitable sites and inviting developers to tender for building what is needed, rather than developers submitting applications for what they want to sell.
- Currently building land can cost up to £500,000 an acre. Clearly this is far too high for low cost housing - it should be limited to £100,000 an acre.

A design as per page 1 could be build 4 or 5 floors high on new developments, housing a large number of families in one community.

New developments need to include vertical growing areas for fresh vegetables to feed the residents, utilising rainwater harvesting for their irrigation. Solar panels would help power to run the building. There should be recreation areas, sports areas and natural habitats for protecting wildlife.

This style of development encourages intergenerational living, increasing everyone's health and well-being, which in turn reduces mental health issues, obesity and diabetes. A child care facility along with an elderly care setting should be within the complex to encourage a reduction in travel needs for already busy lifestyles.

There should also be office space for suitable businesses and light industry units close to the homes but far enough away so as not to become too noisy, and saving traffic congestion.

The Government believes the way forward is more people renting homes, but, rents never end. When those paying rents retire, their pensions won't cover the rents, especially private rents. The state will be paying out billions in housing benefits. One should not have to pay a mortgage or rent after one becomes pensionable age, and that should not be beyond 66 years.

Developers have a lot to answer for regarding the issues we are now experiencing.

I would recommend cap development land equivalent to 100 years from farming each acre of land. Build homes as in the style above, using British steel as a frame off ground to save flooding, with module homes they could be sold at cost, while only being sold back to the Community Land Trust, not onto the market.

Much of our aging populations loneliness and the younger generation's antisocial behavior stems from poor housing estate design and lack of affordability.

Young people coming out of Care, often become homeless. New developments should include a place where children in the care system could be housed and brought up in family environments/assisted living

until they become adults, rather than being bounced around several different foster homes. This saves moving several times and becoming a generation of people who have no one as a real guardian. These young people would become better adults, having a sense of belonging.

The Government's 10-Year Health Plan released earlier this summer sets out an ambitious vision to bring care closer to local communities. It promises a network of integrated neighbourhood services to create an NHS fit for the future. But updating healthcare facilities alone isn't enough - a holistic approach to health must involve the private as well as the public sector.

Thoughtful housing design at an early stage can shape places that nurture health, strengthen social connection and reduce pressure on the NHS, argues Chris Scott

Chris Scott is Development Director & ESG Lead, Southern Team at Muse Developments.

Chris Scott is reported to have written:

Developers have their role to play and must now rise to the challenge of designing housing that actively promotes health and wellbeing.

Our homes are where we spend the vast majority of our time, shaping how we live, work and travel. In doing so, they profoundly influence our health. When designed thoughtfully, new homes can encourage healthier lifestyles and release pressure on the NHS. For developers, two of the biggest opportunities lie in better connectivity and access to safe, welcoming green spaces.

Health driven infrastructure

Physical inactivity costs the NHS an estimated £900 million every year. The most forward-thinking developers are already placing health at the centre of place-making, starting with infrastructure. Well-connected sites with high-quality walking and cycling routes enable seamless active travel, helping residents weave healthy habits into daily life. Providing supporting infrastructure can also boost property values and streamline the planning process, with policy frameworks favouring well-connected, sustainable sites.

Developers must look beyond their red-line boundaries. The health of a place is shaped as much by its connections to surrounding infrastructure as by what lies within its footprint.
