Subject: Objection to local plan. Regulation 19

--Email From External Account--

The proposed access from Golden Hill too The gypsy site has already been rejected by a previous government inspector as totally unsuitable due to the fact that the road narrows to a single lane at that point there is no pedestrian pathway pavement on the west side of the road. also Kent highways acknowledge The same access problems. The increased traffic cars, vans, trailers and caravans accessing the old Thanet Way from golden Hill Will add extra strain to the already congested Thanet way. The loss of a green biodiversity highway for local wildlife would be greatly impacted by this development as it would not join The proposed biodiversity infrastructure being proposed by The adjoining development W5 or W6 or N 21 and 19 as the local council keep changing the proposed title numbers. The first attempt to develop the land in 2008 was rejected on sound and considered planning reasons, all subsequent attempt to develop the site regardless of the size of the development have all been rejected also after appeals by the local council and government inspector. What is wrong yesterday is wrong today and wrong tomorrow.
