Subject: Brooklands Farm Objection

--Email From External Account--

Please be aware & take into account the immense damage the proposed Brooklands Farm development will cause Whitstable & its surrounding areas.

South East Water has admitted it will not be able to supply water to all the proposed developments in the Whitstable area including Brooklands Farm along with those already under construction.

Along with the very real threat of flooding this will cause to residential areas surrounding Brooklands farm.

The roads will be impossible to cope with the huge increase in traffic not just during construction but onward going with all the thousands of residential cars, delivery vans & visiting vehicles.

The dire state of the roads as they already are, with Kent Highways saying they haven't the funds for repairs or upgrading the roads including new roads required to service the proposed Brooklands development. Whitstable roads are already very congested & most days at a standstill.

The pollution & huge health issues to existing residents this development would cause is without question, but also to the existing very precious wild life.

Our Doctors surgeries are already at breaking point with it regularly being impossible to get an appointment even in urgent scenarios.

These arguments against the proposed Brooklands Farm development are just a tip of the iceberg of all those that must be taken into account to reject this development!
